

With the MHub Essential, you control the Cavius Wireless Family sensors and intrusion sensors. You choose your notification persons yourself and what they should be notified about. You can also get a notification when the alarm is turned off/on and by whom.

You are reminded when it is time to test, change the batteries and of course if the alarm goes off. If you want to integrate MHub Essential into your smart home, you can do it through Google Assistant and IFTTT\*.

Give your own name to each detector and sensor. You have full control over what is happening and can see the last 100 events in the log.

Scan the QR code below to see some of what you can do with MHub Essential.
